<th>Title: <strong>ITS Client-Side Wireless Policy</strong></th>
<th>Number: <strong>PL801.0</strong></th>
<th>Eff: 1/22/08</th>
</tr>
</thead>
</table>

**Purpose:** To define the best way to set up wireless laptops for use both on and off campus. This policy allows for the differing needs of faculty, staff and students.

**Policy:**

- **PC:** SecureW2 is the standard wireless supplicant except:
  - Certain laptops have either Dell Wireless Utility or Intel ProSet software pre-installed. These utilities will be used in place of SecureW2 when possible.
  - ITS will not uninstall native software as part of the wireless solution.

- **Macintosh:** Macintosh laptops are natively able to connect to the CWU wireless network with configuration only; no software is installed.

- **PDA:** Due to the variety of platforms/operating systems, PDAs are only supported on a limited basis.
  - Dell Axims have the Odyssey wireless client pre-installed and can be configured for CWU.
  - SecureW2 has a client for Windows CE based PDAs; ITS will install/configure this on appropriate PDAs but due to varying specifications we cannot guarantee success.
  - Other PDAs are not supported but will be looked at individually.

- **Linux:** Linux connection to CWU wireless is currently in development.
  - Development is based on the Open Suse distribution of Linux and the Open 1X supplicant.
