

CS 446 - Peer Assessment of Collaboration

Your Name: _____

Group Number: _____

Phase: _____

Peer assessment: Ideally, all group members will work very hard on their project, effectively give feedback to their teammates' projects, provide outside help when requested, and, consequently, receive full credit for the contributions to the collaboration group.

However, to deal with the possibility that some group members may not pull their fair share, a peer assessment of an individual's contribution to their collaboration group will be used.

At the completion of each phase of the project, each group member will independently award his or her collaboration group members a percentage of the total effort (100%). If you are rating three other students, if everyone did an equal share, then each member should receive a 33.3% share of the total. If you are rating four other students, if everyone did an equal share than all would receive 25% share of the total.

You are free to divide the effort as you see fit, for example 40%, 35%, and 25%, so long as the percentages total 100%. I will use these peer-assessments to determine individual grades for team collaboration (10% of total project grade for the assignment.)

Your individual ratings of your group members will be kept private. You should not rate yourself.

Name of Group Member	Percentage of Effort
1.	
2.	
3.	
4.	
Total:	100%
