Note: Grouping students by county is difficult because the self-reported county data is often missing, or contradicts other data. This summary imposes a methodology on the data that prioritizes the student's self-reported data based on the following priority: (1) home city (for those that match the OFM's official city-county data); (2) home county, if it is a WA county; (3) the FIPS code of the address; and, (4) the home ZIP code for any remaining records. In cases where a city or zip code spans multiple counties, the entity that has the largest population is chosen.
