

PHISH HUNTER

Launching Soon!

NEW Email Security Technology

Phishing uses well-crafted misleading emails to deceive recipients into giving up valuable information, and is rapidly becoming one of the most significant online security threats.

How PHISH HUNTER Protects:

EDUCATE: Learn how to understand and recognize sophisticated phishing and ransomware attacks in all aspects of your online activities

PREVENT: Stop users from giving away their credentials before accounts get compromised using a managed Whitelist and Blacklist

DETECT: Detect when a user's account has been compromised by identifying suspicious account activities

LOCK DOWN: When threats are identified, compromised accounts can be automatically locked down to prevent them from infecting other accounts
